

Jet Li

New York, NY 10002 | 646-340-7501 | jet.li2@outlook.com | github.com/jetligit | linkedin.com/in/jet-li3/

EDUCATION

Rochester Institute of Technology (RIT), Rochester, NY
Bachelor of Science, Computer Science — GPA: 3.85

Expected May 2027

SKILLS

Technical Skills: Java, Python, C, TypeScript, JavaScript, HTML, CSS, SQL, ReactJS, Angular, PostgreSQL, Docker, Git, REST APIs, Agile, Spring Boot, AWS, Full-Stack Development, Backend Systems, Frontend

WORK EXPERIENCE

Graviton Consulting Services Inc.

Feb 2026 - Current

Software Engineering Intern

Remote

- Developed data integration pipelines in enterprise SaaS environments using **REST APIs**, **JavaScript**, and **SQL** to synchronize data across distributed systems
- Built and deployed **2 LLM-powered AI agents** integrated with enterprise HR/ERP systems, automating payroll and benefits workflows
- Debugged and validated data integration processes, identifying inconsistencies and improving system reliability across services

Leap Prep

Jan 2026 - Feb 2026

Software Engineering Intern

New York, NY

- Improved maintainability of the company website by updating frontend components using **React** and **Next.js**, deployed in a **Docker**-based environment
- Refactored and optimized relational database schema and **SQL queries** in Supabase, improving data integrity and query performance

PROJECTS

Video Game Database CLI App, Group of 4 - Data Scientist & Backend developer

Nov 2025

- Built a **Java backend application** with a **PostgreSQL relational database**, implementing authentication, search, recommendations, and collection management
- Designed and optimized **relational database schemas** and **SQL queries** across **6** datasets to support user behavior analysis
- Performed data analysis in **Excel** to evaluate player behavior, identifying a **24.6% seasonal drop** in horror game engagement

Image Locator App, Personal Project

July 2025 - September 2025

- Designed a full-stack web application using **Angular**, **TypeScript**, and **Java**, integrating the **Google Maps API** to display geolocation data with interactive map features
- Integrated **EXIF** metadata extraction and dynamic map rendering with interactive markers
- Enabled real-time updates of photo locations on the map with accurate geolocation rendering

Food Pantry Team Project, Group of 4 - Full-Stack Developer

Jan 2025 - Apr 2025

- Built a full-stack application using **Angular** and **Java Spring Boot**, developing **REST APIs** to manage inventory, users, and transactions
- Implemented secure authentication, shopping cart, and inventory management features while collaborating in a 4-person **Agile team**, translating **user stories and acceptance criteria** into functional features and participating in sprint planning and code reviews
- Developed and tested backend services using **JUnit unit testing**, ensuring reliability
